

Viapass Installation Program

To design and build a network, and implement cutting edge technologies, you need expert advice that will make a difference in meeting budget constraints and tight timeframes.

Viapass Installation Program delivers the tools, expertise, and resources you need to make things happen. Viapass makes sure your planning remains on-course and helps bring new services to market without delay, which is the right way to make your Event a success.

Viapass Installation Program adds resources to your internal project management team: you benefit from a task force that defines specifications and ensures successful installation of all components. All you have to do is supply software configuration information. Viapass does the rest.

Viapass Installation Program: Expert, Efficient, and Cost-Effective.

End-to-end Project Coordination

Viapass Project Manager oversees the activity of all involved resources, tracks shipments, and ensures that all installations make it on schedule across the network. Accountability is a key word. The Project Manager becomes the single point of contact through which your Organization accesses Viapass resources. The Project Manager is proactive in suggesting improvements in design & installation process.

Site surveys for specific needs

For large backbones and access devices, Viapass can schedule an onsite survey. An engineer will ensure that power supplies and external factors on site meet Viapass installation guidelines. The Project Manager will coordinate site preparation in all listed locations accordingly.

Onsite Installation Support

Viapass supplies specialized engineers to manage deployment onsite. This allows you to spare time and to focus on the bigger picture.

Features	Benefit
Installation Coordination	Streamlines communication by providing a single point of contact
	Augments internal resources
	Provides support throughout installation process
	Ensures efficient and successful installation
Site Survey	Verifies site readiness and recommends site improvements as necessary
	Minimizes potential site-related issues that may delay installation and postpone service delivery
Onsite Installation Support	Supplements customer staff
