Internet access speed

Question : **What bandwidth (speed) should I choose for my Internet Access ?**

Viapass gives you the choice between bandwidths from 256 KB/s up to 1 GB/s, depending on the location where you need your connection to be installed. And on your budget.

The choice for bandwidth basically depends on the use made of the connection, and on the number of devices connected to the Internet access.

For multiple computers accessing the web, you should choose a higher bandwidth for comfortable browsing experience.

We recommend choosing your total bandwidth for an average 100 to 200 KB/s per user. So, for 10 users for example, you should preferably choose 1 to 2 MB/s access minimum. Lower bandwidths will work too, but will be less comfortable for users, by offering lower speeds and much longer response times.

For specific uses of Internet access (such as video, or demos needing high bandwidth), these figures may no longer be valid. Please make sure one of your Technicians contact Viapass for support and advice.

You can find additional information on our document "How to order Internet access", available from the same Technical Support web page on our web site www.viapass.com.

Do not hesitate to contact Viapass at info@viapass.com for more information.
