

What to order

This document lists some of the most standard supplied levels of Internet service, along with basic information about what you can do with each one.

These are recommendations only, and should not be interpreted as a solid instruction, or taken as contractual. Depending on actual use, and on users' equipment and configurations, other types of service may work as well, with lower or higher levels of bandwidth.

Please contact Viapass for assistance in case this information does not meet your requirements, or for levels of services not listed on this page.

Important: these recommendations are for Internet bandwidth only.

You may have to order other items, such as cables and switches (hubs) for multiple computers, WiFi coverage of an exhibit space, or other value-added services. You can find complete information on our web pages when ordering: click on any product name to get to a detailed description and for additional information about how and what to order. Please also refer to our on-site guide for advice about how to use our services. This Guide is also available from the same web site home page.

What I want to do:	Nber of devices* (recommended)	Recommended types of service:
eMail, basic web browsing	1	256 Kb/s Internet access
eMail, basic web browsing	1 or 2	512 Kb/s Internet access
